

rootJS - results of the implementation phase

Software Engineering Practice - Winter Term 2015/16

C. Wolff, M. Früh, S. Rajgopal, C. Haas, J. Schwabe, T. Beffart | February 10, 2016

STEINBUCH CENTER FOR COMPUTING

Required Criteria

The bindings must

- Work on Linux

Required Criteria

The bindings must

- Work on Linux ✓

Required Criteria

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter

Required Criteria

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓
- Accept C++ code for just-in-time compilation

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓
- Accept C++ code for just-in-time compilation ✓

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓
- Accept C++ code for just-in-time compilation ✓
- Update dynamically following changes to C++ internals

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓
- Accept C++ code for just-in-time compilation ✓
- Update dynamically following changes to C++ internals ✓

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓
- Accept C++ code for just-in-time compilation ✓
- Update dynamically following changes to C++ internals ✓
- Provide asynchronous wrappers for common I/O operations (i.e. file and tree access)

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓
- Accept C++ code for just-in-time compilation ✓
- Update dynamically following changes to C++ internals ✓
- Provide asynchronous wrappers for common I/O operations (i.e. file and tree access) ✓

The bindings must

- Work on Linux ✓
- Allow the user to interact with any ROOT class from the Node.js JavaScript interpreter ✓
- Accept C++ code for just-in-time compilation ✓
- Update dynamically following changes to C++ internals ✓
- Provide asynchronous wrappers for common I/O operations (i.e. file and tree access) ✓

The bindings should

- Support the streaming of data in JavaScript Object Notation (JSON) format compatible with JavaScript ROOT

The bindings should

- Support the streaming of data in JavaScript Object Notation (JSON) format compatible with JavaScript ROOT ✓

The bindings should

- Support the streaming of data in JavaScript Object Notation (JSON) format compatible with JavaScript ROOT ✓
- Implement a web server based on Node.js to mimic the function of the ROOT HTTP server

The bindings should

- Support the streaming of data in JavaScript Object Notation (JSON) format compatible with JavaScript ROOT ✓
- Implement a web server based on Node.js to mimic the function of the ROOT HTTP server ✓

The bindings should

- Support the streaming of data in JavaScript Object Notation (JSON) format compatible with JavaScript ROOT ✓
- Implement a web server based on Node.js to mimic the function of the ROOT HTTP server ✓
- Work OS independent (i.e. support Mac OS X, Linux operating systems)

The bindings should

- Support the streaming of data in JavaScript Object Notation (JSON) format compatible with JavaScript ROOT ✓
- Implement a web server based on Node.js to mimic the function of the ROOT HTTP server ✓
- Work OS independent (i.e. support Mac OS X, Linux operating systems) ✓

The bindings should

- Support the streaming of data in JavaScript Object Notation (JSON) format compatible with JavaScript ROOT ✓
- Implement a web server based on Node.js to mimic the function of the ROOT HTTP server ✓
- Work OS independent (i.e. support Mac OS X, Linux operating systems) ✓

The bindings should not

- Add any extending functionality to the existing ROOT framework

The bindings should not

- Add any extending functionality to the existing ROOT framework ✓

The bindings should not

- Add any extending functionality to the existing ROOT framework ✓
- Necessarily support previous/future ROOT versions

The bindings should not

- Add any extending functionality to the existing ROOT framework ✓
- Necessarily support previous/future ROOT versions ✓

The bindings should not

- Add any extending functionality to the existing ROOT framework ✓
- Necessarily support previous/future ROOT versions ✓
